United States Tax Court

This is a U.S. government system. Your use indicates your consent to monitoring and recording. Therefore, no expectation of privacy is to be assumed. Misuse is subject to criminal and civil penalties.

1 Single search bar

Single search bar to search document title, docket number, and party names.

2 Arbitrary search limit

There's no evidence to support capping the number of results is appropriate. Users are either neutral or find it a hindrance.

Do not limit the number of search results. Show number of total search results in header, and progressively display the results in sets of 25 using existing Load More functionality.

If a user gets a result that is capped at 100, then searches again and is capped a second time, they have no way of knowing if their queries are getting smaller.

3 Enter as page default key

Users expect "enter" to initiate the search

4 Flexibility in criteria

There's a need for more flexible search criteria - allow search without keyword

5 Match between system and the real world

Nielsen Usability Heuristics #2 Users intuitively want to use the words "and", "or" for Boolean search. No one knows what the pipe character is.

6 Docket number link

Docket number link behaves unexpectedly and slows users down. Recommend using the same "new tab" link behavior as the order link.

7 Identifying the best result is still guesswork

Users still guess at which result will best suit their needs by clicking one they "think" will be the most useful and manually scanning through it. Keyword match preview or highlight would speed up their processes.

8 There is precedent for advanced search mechanics

Advanced functions (proximity, extenders, etc) would improve the experience. These intuitively allow users to know if documents contain not only language they're looking for, but also context.

9 Search instruction and tips

Add quick instructions on screen at all times. Include more in-depth instructions with examples in a downloadable PDF.

10 Default sort by date (newest to oldest)

Since relevancy is so subjective, a default sort by date would match known search paradigms. Allow users to invert the sort order.

11 Expanded preview

Provide option for users to preview a snippet of the document contents where the keyword is matched. This prevent them from having to click into each document individually.
